

O-m6 Technologies conceives different 3D solutions!

Thanks to the acquisition of a **3D printer**, O-m6 Technologies is now able to print and design basic parts such as; boots, housing transition, brackets and even create custom-design products tailored to your specific applications.

In fact, our team was entrusted to **print a loopback case with a custom isolator**. This minimizes the insertion loss (increased radius of curvature), on a dense patch panel.

Don't hesitate to contact us : sales@om6.com to get technical information or discuss your project ideas!
